### make-up features RETINOL: THE KEY TO PERFECT SKIN

By [Amy L. Swenson](#)

Another key use for Retinol is its ability to improve skin affected by sun damage, by increasing cell turnover, to reveal healthier top layers of skin. Created by plastic surgeon Dr. Barry L. Cohen and available at Harvey Nichols, PH Advantage's lotion was created especially to improve the appearance of skin affected by photo-damage - sun damage to you and me. The lotion is light, with a pH of 8 (skin should always be kept within 4.5 - 5.5 pH) so it won't be irritating regardless of the potent Retinol ingredient. Not only that, but this booster product can be used with any skincare regime you are currently using, so there is no need to get match-matchy with your products, especially if you've attached to a particular routine, this just slots right in.

Effective Vitamin A Polypeptide Lotion, £65 by [pH Advantage](#)
